Lippincott Audience Targeting

Reach your ideal specialist across our network of trusted clinical content.

Wolters Kluwer, publisher of the Lippincott portfolio and a leading provider of healthcare information, couples industry-leading audience reach with targeted digital advertising solutions to help you increase brand recall, improve conversions, and raise brand awareness.

Top 5 Benefits of Audience Targeting

1. Improved alignment of your message to your target specialist
2. Ability to personalize creative
3. Capacity to test response to different segments
4. Deeper insights into how HCP segments engage with your campaign
5. Increased efficiency in your campaign spend
Target HCPs while they are searching for clinical information.

HCPs value educational materials but have limited time to read them. That’s why they turn to journals as their top media resource when making clinical decisions. HCPs access content across the Lippincott network on multiple devices, often on sites outside of their endemic specialty. In fact, a subscriber connects with digital journals on average of 9x a month to search for articles, read Publish Ahead of Print, browse the current issue’s table of contents, and share content via email. These repeat visits create multiple opportunities to build product recognition and trigger action.

Your goals are unique.
Your segmentation strategy should be too.

Predefined and custom segments include:

**Specialty Channel-Based**
Choose a journal web site or channel of related specialty sites.

**Behavioral**
Reach HCPs based on their online behavior: topics they are reading, email engagement, and more.

**Contextual**
Place your ad only on pages covering specific topics or keywords.

**Profession**
Apply our deterministic and third-party data of validated specialty or profession.

**Geographic**
Segment by country or region.

**Identity-based**
Match your own data to ours to pinpoint individual HCPs by NPI or email.

Leverage our deep audience insights, driven by deterministic and probabilistic data. Sources include:

- Website Registrants
- Quintiles/IMS 3rd Party Verified Data
- Society Members
- Conference Attendees
- State Licenses
- Journal Subscribers & Book Buyers
The Power of the Lippincott Network
